

MANAS PRASAD

8809227514 | manasprasad712@gmail.com | linkedin.com/in/manas-prasad-219259157/

TECHNICAL SKILLS

- **Languages & Frameworks:** Python (Expert), SQL, JavaScript, React.js, Django, Flask
 - **AI/ML & GenAI:** LLM Integration (GPT-4, Claude, LLaMA, Phi-4), Prompt Engineering, RAG Architectures, Vector Databases, Embeddings, Tool-Calling, Function Orchestration
 - **Agentic Frameworks:** LangChain, LangGraph, CrewAI, AutoGen – building grounded and scalable AI applications
 - **Backend & APIs:** RESTful API Design (Flask, Django), Scalable Backend Services, Microservices Architecture
 - **Cloud & DevOps:** AWS, Docker, CI/CD Pipelines (GitHub Actions), Containerization, Secure Deployment Practices
 - **Data & Evaluation:** NLP (Entity Recognition, Summarization), Model Evaluation, Performance Optimization, Monitoring Frameworks, Data Transformations
 - **Tools & Databases:** MySQL, Git, React-Flow, Excel Reporting, Software Engineering Best Practices
-

EDUCATION

BTech in Production and Industrial Engineering | Birla Institute of Technology, Mesra | 8.7 GPA | July 2024

PROFESSIONAL EXPERIENCE

PricewaterhouseCoopers Private Limited – Technological Consultant

- Developed and deployed 3+ production-grade Generative AI solutions leveraging **LLM providers (GPT-4, Claude, LLaMA, Phi-4)** to solve complex business challenges across multiple industries.
- Designed and implemented **agentic AI workflows** using orchestration frameworks (LangChain, LangGraph), incorporating **RAG architectures, vector databases, embeddings, and tool-calling** for grounded, scalable AI applications.
- Built and maintained **scalable backend services and RESTful APIs** (Python Flask/Django) to support GenAI/agent workflows in production environments.
- Engineered advanced **dynamic and meta prompting pipelines** with custom business logic, ensuring high adaptability across diverse client requirements and document formats.
- Performed **model evaluation and performance optimization** across multiple LLMs, benchmarking accuracy, latency, and cost efficiency to ensure responsible AI practices.
- Led data analysis and predictive modeling initiatives, advising 5+ clients on emerging AI/GenAI technologies for seamless adoption and maximum impact.
- Incorporated **NLP capabilities** (entity recognition, document summarization) to enable smarter downstream automation and support client-specific use cases.

PricewaterhouseCoopers Private Limited – Technological Consultant Intern

- Gained hands-on experience in generative AI, applying **LLM techniques** to extract meaningful insights from structured and unstructured data.
- Developed and deployed **Python Flask APIs**, contributing to backend functionality and production-grade application delivery.
- Enhanced proficiency in Python, leveraging advanced features for **data transformations**, manipulation, and automated reporting.

Airports Authority of India, Ranchi – Apprenticeship

- Conducted data analysis of airline cancellation data (2019), identifying key trends and patterns using **Python and SQL**.
 - Gained insights into air traffic control operations, regulatory frameworks, and aviation logistics.
-

KEY PROJECTS

LLM-Powered Invoice Data Extraction System

- Built an intelligent invoice extraction system using **multiple LLMs (GPT-4, Phi-4, LLaMA 3.1, Claude)** to automate processing of 22+ structured and unstructured invoice fields.
- Designed **advanced prompt engineering pipelines** (dynamic and meta prompting) tailored to client-specific rules and edge cases, ensuring high reliability.
- Developed custom Python-based business logic with **function orchestration and tool-calling** patterns for robust, production-grade automation.
- Integrated **NLP features** (entity recognition, document summarization) to support downstream automation and smarter document processing.
- Implemented **model evaluation frameworks** to benchmark accuracy and performance across LLM providers, optimizing for cost efficiency and reliability.

Digital Workmate – AI Document Processing Platform (React.js + Django)

- Developed a full-stack user interface using **React.js and Django** to manage the lifecycle of uploaded, processed, and reviewed documents.
 - Integrated drag-and-drop **agent creation using React-Flow**, enabling users to visually configure and manage AI-powered document processing workflows.
 - Designed and implemented **MySQL-backed data models** to store structured invoice metadata, processing status, and review logs.
 - Built real-time visibility dashboards with **Excel export functionality** for reporting and analysis.
 - Followed **software engineering best practices** including version control (Git), code reviews, and modular architecture.
-

LEADERSHIP & ACTIVITIES

- **Training and Placement Coordinator** (May 2023 – May 2024): Organized career development initiatives, managed employer relations, independently handled 10+ companies, contributing to 140+ placements.
- **Vice President, Finance Club** – BIT Mesra (Feb 2023 – May 2024): Organised 50+ events, building student outreach of 500+ with 100+ active participants.
- **Badminton**: Selected for State Championship (2017) and represented school at Cluster level (2018).
